

LiveKinnectSM

Creating connections is at the core of what we do.

Whether it's connecting employees to their benefits or connecting clients to powerful administrative tools to manage their benefits program. So it only makes sense that we also excel at creating connections with carriers and service partners.

LiveKinnectSM is our solution for advanced connections, both inbound and outbound, from Benefitsolver[®] to third party systems. Passing information in and out of our system is a crucial part of managing a benefits program, which is why through LiveKinnect, we offer four different connections.

LiveKinnect Single Sign-On

We understand the need for flexibility and ease of access for members. With so many web-based applications in use, providing one point of access for employees saves time and headaches. With our Single Sign-On (SSO) functionality, employees and their information are securely passed into another system without the hassle of re-entering information.

LiveKinnect Web Services

This is our advanced connection between Benefitsolver and another system or carrier that allows information to be passed back and forth in a secure environment. By utilizing this service, we create efficiencies in EOI decisions and more importantly, protecting the employee's information.

LiveKinnect Hosted

This connection allows for enrollment in specific plans within Benefitsolver, with no need to link out to carrier sites during the enrollment process or need for additional underwriting information. Enrollment is easy and similar to other benefits.

LiveKinnect API

Our LiveKinnect API allows us to be connected to partners in a new way. Using our API, outside carriers and vendors can make real-time connections (or calls) to and from our system. This facilitates controlled communication when important information needs to be passed back and forth to fully manage your benefits program.

Businessolver currently has established connections with a number of carriers and service partners, and we continue to build our integrations every day with a dedicated product team.
